HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

Response to Amendment

1. This Office action is in response to the amendment filed 02/24/2011, wherein claims 1, 3-19 and 21-29 are pending; claims 1, 17 and 19 have been amended.
2. Acknowledgement is made of the amendment to the title.

Allowable Subject Matter

3. Claims 1, 3-19 and 21-29 are allowed.
4. The following is an examiner's statement of reasons for allowance: The present claims are allowable over Ando et al. (US 2004/0176498) and Fryd et al. (US 6,262,152).

The present invention is directed to a process of encapsulating a particulate solid by dispersing a particulate solid in a liquid medium, in the presence of a dispersant and a cross-linking agent and cross-linking the dispersant with the cross-linking agent to encapsulate the particulate solid, wherein the functional group on the dispersant used for the cross-linking reaction is a keto group, an aldehyde group, or a beta-diketoester group, and the cross-linking agent has at least two groups reactive towards said functional group. The invention is also directed to products comprising the resulting encapsulated particulate solid.

Fryd et al teaches a similar encapsulation process but fails to teach a dispersant having a cross-linkable group selected from a keto group, an aldehyde group, or a beta-diketoester group.

Ando et al discloses an aqueous inkjet ink composition comprising a colored microparticle dispersion, which is prepared by a method comprising the following steps: (i) a polymer (dispersant) and a colorant are mixed with organic solvents to be emulsify-dispersed [0085], (ii) the solvents are then removed and water is added, together with a cross-linking agent, to form an aqueous dispersion, (iii) the polymer is cross-linked using the cross-linking agent, preferably at a temperature of 40-90°C if a short reaction time is desired [0101], and (iv) more monomers, and subsequently a cross-linking agent, are added to the (seed) dispersion obtained in step (iii) followed by polymerization to form a cross-linked polymeric shell encapsulating the seed particle obtained in step (iii) [0105-0106]. Several modes of cross-linking are taught [0037-0052]. One of those modes is a reaction between a keto group (on the polymer) and a hydrazide cross-linking agent, wherein said keto group may come from such monomer as diacetone acrylamide [0051]. The colorant includes pigments (i.e., particulate solids) and dyes. The claimed process and products are not obvious over Ando et al for the following reasons. First, the keto-hydrazide cross-linking mode is taught as one of the possibilities and it is not exemplified. It is shown in the instant application that cross-linking based on keto, aldehyde or beta-diketoester cross-linking group provides better results than using other conventional cross-linking modes such as isocyanate-hydroxyl pair, which is exemplified by Ando et al. There are no motivations for one skilled in the art to select the keto-hydrazide cross-linking scheme from all the cross-linking schemes taught by the prior art. Second, though pigments are mentioned, the prior art process is mainly directed to encapsulating dyes, which are not particular solids.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
